# “Everyone grows only if dreamed”

poesiadidanilodolci

There are someone who teach  
leading others like horses  
step by step:  
perhaps there are those  
who feel satisfied so driven.

There are those who teach by praising  
What they find good and amusing:  
there are also those who feel satisfied  
being encouraged.

There are also those who educate, without hiding  
the absurd that is in the world, open to everyone  
development but looking  
to be clear to the other as to oneself,  
dreaming about others as they are not now:  
everyone grows only if dreamed.

## Open to welcome

The time of the “goodbye”, in the morning, or when you leave for going back home, requires places and tools in order to facilitate the little big journey that the child makes every day.

Every child is an inexperienced and frightened traveler, so the context around him must stimulate his curiosity, reassure him and push him to look forward, in small steps, towards that new world in which he can feel good together with other travellers. The “welcome” is therefore the focus of each installation placed at the entrance; it takes the form of functional furniture for storing the child's objects, soft carpets with materials useful for playing and stimulating; in general, installations capable of not stifling the environment but opening it up to spaces to be explored, day after day, step by step.

Welcoming doesn't just mean encouraging detachment but seeking to attenuate it, making one perceive a continuous journey with pleasant stops in which one stays, and returns, willingly.

### Furniture and ideas for the entrance

**Low cabinet with racks, shoes-holder and shelves** - The perfect space to contain, in an proper manner, the small kids' shoes or other personal items.

**Dressing room unit with shoe rack and shelf** - With the help of adults, children can store their jackets, backpacks and shoes in a functional space.

**Cork panel** - A handy blackboard where fixing important communications but also drawings, symbols, or first didactic instructions.

**270° angle wall tree macrostructure** - Ideal for taking advantage of the intersections of two walls. The tree beautifies the space and adds functionality thanks to the practical storage bases and the holes where you can hang nice games or crafts.

# Make the environment comfortable

**Soft spaces are places for relationships, rest or discovery and can always be changed as needed.**

On soft spaces you can sit or lie down, you can wait, watching others, playing alone or together... these are spaces open to everyone and to everything; facilitate the moment of greeting and allow each child to find, and change every day, his way of being. A soft, versatile and unstructured place at the entrance is useful because it acts as a bridge to the teaching spaces.

**Tree seats** - They are playful seats with a curious look where being able to place the toys, park for a while or to bring close to other soft elements for original arrangements.

**Atollo soft composition** - Modular element that embraces and protects those who enter, leaving the visual relationship with the other open and with the adult.

## Finding your own space

The mess makes the child confuse and does not help him to be feel protected; so the modular elements become fundamental in order to organize the common areas including the changing room.

Cabinets, low or high furniture, with one or more doors, are perfect for this scope as they delimit the space and make it functional. It's possible to personalize each locker with individual markings for your favor autonomy in space management.

The visual symbol helps to develop the right sense of ownership and satisfies the little ones who know every day that they will find a safe anchor upon their arrival and always present.

The high quality of the materials is combined with a thoughtful soft chromaticism to underline the natural element and to give serenity to the environment.

### Furniture and wall furnishes

**High cabinet with 3 doors** - A versatile solution in which the internal space is large and roomy.  
**Low cabinet with boxes** - Open to facilitate the practicality of use, the shoe cabinet is essential in any reception space.

**Low cabinet with 3 doors** - Closed and versatile can also be used by the little ones thanks to the practical hole opening.

**180° angle wall tree macrostructure** - No room will be wasted; the wall-tree allows you to furnish and make functional all those heights often useless.

## To make backdrops

Every educational experience takes place in space; in services 0-6 the definition of the context in which the relationship is inserted must support the activity of the adult and the child, crossing perfectly the pedagogical needs of both.

Tables, chairs, materials and objects, if valued, are the elements from which set out to give meaning to the educational environment; they shape it space to create always new scenarios. The table becomes the place of experimentation, creativity, "trying to do it yourself" and together. It delimits the space of action but places it in relation to it of others and with the surrounding environment, in a harmony of shapes and colors. Creating a space with tables and chairs within the environment is as important as opening spaces to free play.

### Activity tables with/without box

The tables with modular shapes can be joined together to create multiple workstations in order to facilitate relationship and group activities, can be placed consecutively to create a dynamic row or used individually. The sinuous shapes soften the space, give a visual feeling of serene playfulness and avoid the hierarchy of spaces in favor of sharing. The tub in the center, from circular shape, it is a functional space to gather small games and materials to enable sharing of the same. The table with tub is particularly indicated for creative activities and manipulation.

# Set up the pedagogical space

The child constantly discover himself and the world; it is in this prodigious progress that new expertises and autonomy are made.

In order to make easier this personal exploration there is a need to build around him an easy space, an organized environment, a place made up of centers of interest able to offer different degrees and ways of contact. Space almost becomes a miniature of the world; for this reason, in order for the relationship to be serene and stimulating, they must foresee all those elements that put order in the world and at the same time facilitate the relationship with it. Fundamental therefore they become the container furniture, the stools, the tables, the bookcases, the blackboards and child-friendly elements without forgetting the necessary empty space, not to be filled, to allow him to travel the small streets of the "classroom world".

## Container furniture

Light but robust, they favor the autonomous management of space and are handy elements for storing toys and materials.

**Set of 3 Activity Tables Multiple Heights** - Tables can be used as containers thanks to the practical tub and serve as a base for experimentation, drawing, free play or manipulation.

The different heights physically separate the space of the different activities, they give dynamism to the environment and are functional at the different heights some children.

**Toy Storage Trolley** - A spacious item to store elements with unusual or bulkier shapes; an object which is easily transported thanks to the wheels and can, in a short time and comfortably, facilitate the tidying up of the classroom.

**Steineraino Trolley** - Perfect for tidying up the room and stimulate the child to "seek and take" what he wants: colours, books, musical instruments or brushes.

## To house the hospitality

**Creativity needs many things: blank sheets of paper, painted hands, colors and stories but, above all, must find fertile ground to blossom.**

To create a stimulating environment, functional spaces and objects are needed for creative activities: tables with trays, comfortable seats, materials to manipulate and... a tree! Made with a solid wooden structure that stretches towards the sky, with large green leaves arranged on floors at different heights, the tree is a place that allows "enchantment", the intimacy of those who fabula and those who listen as only the narrative allows. It's a labyrinth to sneak through, it is an "appendix" floating in the air... it is a place of games, words, dreams and creativity.

Modularity

# To structure the space

The structured environment to welcome and contain the didactic tools (board games, puzzles, memory etc.) helps to put in relation to shapes, colors, numbers and to build the former mental representations of concepts and actions.

The activities in this environment are learning experiences and socializing, for which we recommend large neutral tables, able to facilitate group activity and redundancy of action, and no more stools but chairs where the little ones can sit safely while remaining comfortable all the time.

To facilitate the activities come in support comfortable furniture to chests of drawers with open compartments or models with doors closed on the side upper, useful for storing and guarding delicate materials and objects; the drawers at child height, on the other hand, encourage the latter to develop independence. What unites them is our promise: maximum usability in solid security.

## To fill and empty

**Game activities and creative workshops require set-ups that primarily facilitate adults: tables where to arrange materials, safe chairs on which children can sit or lean, modular containers to organize the child-friendly space.**

This is why large trolleys with wheels are recommended and appreciated. These trusty helpers move quickly from one part of the classroom to another and allow for a quick, perhaps not perfect, tidying up of the common areas. They can also be easily used by children who can make their small but fundamental contribution by filling them with objects and games found on the tables or on the floor. Even the operation of "pulling out" from the trolley will amuse the little explorers of the world, because in childhood the void and the full, the inside and the outside, the there is and is no longer there, the emptying and the filling are opposites that amuse the child and improve his motor and cognitive skills.

## Find the right place

Anyone who works in kindergarten knows how important it is have a set-up that does not hinder free discovery of children and that at the same time integrates well with the environment.

This is why we have created modular furnishing elements, designed on modules, with different heights and shapes able to create the perfect solution for every space. We suggest alternating the child-height cabinets with furniture with the same design but accessible only by adults in order to be able to contain the most delicate materials, sensitive to shocks or that you wish to preserve. Trolleys with multiple compartments with wheels are a bit of a must for every school.

Practical and comfortable, they find the right place for everything and allow you to better organize books, games and materials for activity; they are also perfect helpers to support, when needed, any objects, clothes or towels that he needs to find momentary placement a little distant from the visual field some children.

**Mobile 12 boxes 3 through compartments** - A great way to furnish the classroom, adding functionality to the division into zones.

**Activity container on wheels** - Practical and comfortable support for materials and as a support surface.

**Table with wooden legs** - The furnishing accessory which cannot be missing in the school.

## To see the free play

**The game is essential in kindergarten; Yes they can devise activities at the table or leave time for free play, relevant moment because it stimulates different areas of development, from sensory to emotional to cognitive.**

For educators it is important to be able to observe the behavior spontaneous so as to understand goals, relationships, eventual inconvenience or difficulty. The ideal environment makes available to children constructions, books, objects, games etc. and offers a space stimulating but neutral enough, to be

modeled with the imagination.

Thanks to the modularity of our furnishing elements, they can be created specifically dedicated paths or areas to free play.

**Footpegs** - Soft, smooth, specially free of molded figures in order to leave the space neutral and modelable with the imagination.

**Containers** - Made at child's height for ease of storage development of independence and motor skills.

**Wall panels** - Not just furnishing elements but objects functional to the development of activities and games.

# Open windows to the world

Reading represents a magical time in kindergarten; it is realized thanks to moments of sharing in which the adult can attract the focus on the cover, read by dramatizing the voice of the characters and events, show drawings and illustrations.

Reading can be experienced as a moment of relaxation in which you lie down, sitting down or leaning on one gets carried away by words and sounds. Hence the area dedicated to books, small big windows on the world, it is outlined by installations circular, in which visibility is guaranteed to all, on which there are seats and soft pillows to suit every child's preferences. Functional furniture must create compartments for the storage of books and objects useful for theatrical reading (puppets, hats, theater items to represent the story and create curiosity) as well as a welcoming stalls.

**Medium curved container on wheels** - Furniture for the storage of books and objects, with double compartment, able to be moved easily.

**Curved Storage Bench on Wheels** - Dual function is perfectly integrated, the seat is also a practical container.

**Internal soft seat** - Cozy element capable of creating circles and semicircles thanks to its modularity.

## Pretend to

Symbolic play is the basis of the child's development; it is an important and demanding activity that progresses in childhood along with other skills. Every project education must therefore support with objects and furnishings this playful moment, facilitating the imagination and the creation of worlds invisible to adults.

Starting from 12/18 months the child experiences a shape of new thought, he can imagine in his mind people and situations regardless of their presence and this is how he transforms what he sees into what is functional to her game: dolls drink tea, chairs become cars, a marker turns into a magic wand.

The furnishings of the kindergarten must stimulate this process through simple elements able to remember, for shapes, colors and sizes, real-life objects and scenes.

## To scout with body

The child's body is the primary vehicle of emotions, discoveries, insights and fun. Corporality is a natural need, it allows the formation of the self and to enter into relationship with others and with the world.

To encourage space exploration and skill development connected, all it takes are small expedients capable of transforming a simple room in an inspiring environment.

What is needed are soft mattresses, modular carpets, tactile materials, small slides and platforms on which to get on and off insecurity.

Each item can be easily moved or moved closer to others to compose ever new paths... because if the body it is in motion, so is the mind.

## Mediation learning: labs

The development of creativity, motor skills, cognitive skills, and more of all, of the multiple intelligences, pass through guided activities than often take the form of simple sensory laboratories.

To encourage personal discovery, the pleasure of touching and trying alone are needed suitable ideas, methods and spaces. For this last point we recommend creating environments in which large and comfortable containers are available for the necessary materials, and that these furnishing elements integrate well with the environment. I am therefore preferable curved, child-friendly and modular furnishings capable of fulfilling at the same time as functionality and aesthetic pleasure.

The storage benches and containers on wheels are perfect for accommodating everything what can be of help in carrying out a laboratory activity.

# Promote motor skills and sensoriality modularity

Stimulate baby's sensory development is one of the responsibilities of the kindergarten. Sight, hearing and touch, are the senses most involved in the growth process; in order to test them need, environments that favor fine motor skills and spatial perception.

**Mobile first steps** - A solid structure on which experience motor skills, increase perception space and refine autonomous walking and touch, thanks to the practical handrails.

**Tree panel with wall mirror** - La perception of self in the mirror begins towards the 2 years; he action of recognition is much more of a game, it is the identity that becomes aware.

**Wall tree panel** - An element that used in conjunction with the mirror tree panel it contributes to forming a sensory journey and movement through the appropriate handrails.

## ... Sensory links

**Places dedicated to children should encourage perceptive, visual, tactile and sound stimulation.**

Exploring the floor, continuously seeking an upright position, manipulating objects, caressing different tactile materials, observing the surrounding world and having the possibility of finding refuge in a safe and welcoming place are all actions that the child needs to experiment.

**The den** - An intimate place where you can find hidden and reserved spaces, designed to welcome, protect and contain. A place in which boys and girls can experiment in confidentiality.

**Soft clover elements** - They allow you to create psychomotor paths on 3 levels of height. Combinable with touch panels, they create multiple compositions both in terms of shape and materials.

**The puzzle carpets** - By moving between them, the different surfaces are revealed to the touch and, to the ear, the sound they produce when they are touched.

## Make place to dreams

**How difficult must it be for a child to let himself go to sleep in a bed different from the home bed? To facilitate this moment, is needed a trust relationship with the educator and with the environment.**

It is very useful that the sleeping place, the shoes place, the place of the cushions, the place of the loved object is always the same. The routine of spaces and times comforts little explorers and allows them to decrease adaptation times.

It is therefore necessary to provide sufficient compartments for storing, in order, every single object.

The furnishings designed for the sleeping area provide solutions fixed or on wheels, they are modular and made with the same style so that you can fit out the available space according to the needs of the school. Everything is in soft colored wood for a relaxing and natural effect.

# Optimize the space

**Mattresses, nest berths, plastic or box beds... all the solutions are simple to clean, comfortable for rest, light, in non-toxic material and without sharp edges.**

Each piece of furniture is designed to facilitate the relaxation of the little ones and the organization of the educators.

The solution proposed here, ideal for optimizing space, is the mattress one combined with the tall container with 36 shelves. The cabinet allows you to easily store individual mats in the upper part and blankets, or other items, in the lower part. The encumbrance is really minimal while the functionality and practicality of use are high. Depending on the age of the children, the size available, and the desired style, we offer different solutions that can adapt to specific needs.

All the pieces of furniture are modular and combinable with each other.

### Tables

The tables can be placed side by side, so as to allow the coplanarity of the tops to form surfaces wider working areas for group work without gaps or cracks (except for the discontinuity due to the measures adopted to reduce the presence of sharp edges). The dimensions of the tables are also studied to allow for modularity, so as to allow educators to vary the setting of the classroom according to of educational needs.

The tops are in birch plywood covered on both sides with plastic laminate with visible edges rounded up to standard.

The tables are made in two versions, with legs in turned solid beech or with legs in Sitings painted metal.

The legs are fixed directly to the top by means of a special coupling plate which gives solidity and does not limit movements below the surface.

### Sittings

**The chairs can be** entirely made of natural varnished birch plywood.

Seat and backrest available in colored samples of your choice.

The backrest has an oval hole to make it easier to grip and move around the classroom.

The seats, at the base, are equipped with anti-noise plastic feet.

**The wooden version** is made of solid beech turned and varnished with natural varnishes to water.

The range is completed by **chairs with epoxy powder coated metal frames**.

The seat is made with a beech plywood shell with a special anatomical shape that gives it to the seat a high degree of comfort.

### Soft

The **soft elements** are built with fireproof materials in Class 1 IM reaction to fire, hypoallergenic and PVC-free.

The coverings used are easy to clean. Finishes that are pleasant to the touch and allow adherence to the floor in a stable manner without compromising educational functionality.

Wide range of colors to match the furniture collection to create welcoming educational environments and comfortable.

## Quality. Safety. Sustainability

Certification is a form of “**direct insurance**”, with which the compliance of a product and service to the applicable requirements. Their credibility depends on the organizations that issue them: the qualification of the certification bodies is indicated by the term “accreditation”.

The theme of sustainability has always been central to **Mobilferro's** corporate strategies.

“Sustainable development is that development which enables the present generation to satisfy the own needs without compromising the ability of future generations to meet their own”.

The three pillars of sustainability for a “development” derive from the Treaty of Amsterdam of 1997 harmonious of human activities”.

The “**Minimum Environmental Criteria**” adopted with the Decree of the Ministry of the Environment and Protection of

Territory, contain the indications for Green Procurement of the PAN-GPP (National Action Plan of Green Public Procurement) the approach by which the Public Administrations integrate the criteria environment at all stages of the purchasing process, encouraging the diffusion of environmental technologies and the development of environmentally sound products, through research and the choice of results and solutions that have the least possible impact on the environment along the entire life cycle.

## Mobilferro Quality Certified

La provenienza del materiale di origine forestale utilizzato per la realizzazione dei nostri prodotti proviene da foreste gestite in modo sostenibile certificate FSC. Mobilferro garantisce il mantenimento della catena di custodia attraverso la certificazione FSC dei propri arredi in legno o derivati di origine forestale.
